10 Burner PROPANE CO2 Generator - Low Altitude

Model: dl-201097

10 Burner PROPANE CO2 Generator - Low Altitude

Manufacturer: LTL Controls

10 Burner PROPANE CO2 Generator - Low Altitude (201097)There are 2 distinct types of LTL Controls 10 Burner CO2 Generators available, those for Propane and those for Natural Gas. You can then choose between High Altitude (above 5,000 ft) and Low Altitude (below 5,000 ft) models of each. All generators come with the correct regulator and hose, along with pre-installed, clean-burning brass burners. Both units are equipped with features like a safety tip-over switch, which automatically turns off the unit if it tips over or falls, an electronic ignition with dual redundant solenoid valves, which eliminates the open pilot flame and makes these generators twice as safe as others on the market. The 10 Burner Generator features a variable output, giving you the ability to activate and deactivate certain burners so the generator can run with 2 burners, 6 burners, or the full 10.
