CORAL RX ONE SHOT

Model: 731945

CORAL RX ONE SHOT

Manufacturer: -

CoralRx
Coral Rx was developed in 2006 for two purposes: to treat corals suffering with parasites, and as a prophylactic measure to promote healthy corals before parasites or bacterial infections become harmful. Coral Rx is tough on parasites, yet gentle on your coral (contains no iodine or oxidizers) allowing you to be proactive in protecting your investment.

Coral Rx removes many of the “hard to deal with” coral pests like Acropora-Eating Flatworms, Montipora-Eating Nudibranchs and Zoanthid-Eating Nudibranchs.

Promotes Coral Health – Coral Rx is hard on parasites yet easy on corals making it a perfect prophylactic treatment protecting your coral investment. Whether or not you quarantine your corals before putting them in your aquarium, a dip in Coral Rx decreases the probability of adding a parasite into your aquarium eco-system.

Usage:

Coral Rx can be used in treating many types of live corals; soft, LPS and SPS. Coral Rx should be used in treating corals that have parasites or other bacterial infections. Additionally, it should be used as a prophylactic treatment before bringing live coral into your aquarium.

Dosage per gallon of dip

Coral Rx: 20ml or 4 capfuls
Coral Rx Pro: 30 drops
Coral Rx Industrial: 10 drops

Price: $2.96
