Carboload Liquid 4L

Model: dl-AN2450-15
Carboload Liquid 4L

Manufacturer: Advanced Nutrients

Carboload Liquid 4L Carboloading your plants requires a specialty formula. In actuality, your plants best absorb simple or complex carbohydrates when they are present as Arabinose, Dextrose, Glucose, Maltose and Xylose from Raw Cane Extract, Malt Extract, Cranberry Extract and other premium carbohydrate sources. Not only does this end mid-bloom slump but these materials fuel beneficial bacteria and fungi in your root zone. When you've installed beneficial bacteria and fungi in your root zone, they thrive best when they have externally-provided carbos to feed on. Beneficial bacteria and fungi increase root mass, increase nutrient absorption, protect roots, and produce hormones that stimulate floral size, potency and value. So now that you've seen how to use the right kinds of carbos to provide energy and root enhancement, what else can you do to create gourmet flowers with enhanced taste, size, potency, and aroma? As it turns out, by providing the list of carbo sources we just discussed, you're also enhancing the taste and aroma of your plants.
