Soil & Hydroponics Grow Media

- Hydroton / HigroMite,

Rockwool / Stonewool, Coconut Coir

(Coco), Potting Soil, Worm Castings

Expert Slab 6" Fat (9 slabs per case) 6" x 4" x 36"

Model: eco-8033
Expert Slab 6" Fat (9 slabs per case) 6" x 4" x 36"

Manufacturer: grodan

Expert Slab 6” Fat (9 slabs per case) 6” x 4” x 36” (eco-8033)Expert 15/100 Slab, 6"x4", case of 9

Grodan Stonewool (rockwool) is made from molten rock spun into cotton candy-like fibers and then compressed into cubes, blocks, or slabs. Where other rockwool brand manufacturers cut all sizes from one batch of wool, Grodan is unique by making different types of fibers. The purpose is to support the requirement of the plant in the different plant stages. Grodan has a tremendous capacity for absorbing nutrient solution while retaining plenty of oxygen for rapid plant growth. Grodan comes in graduated sizes. Seedlings started in cubes are easily transferred to blocks and then onto slabs, if desired. Seedlings or cuttings started in the Grodan cubes can also be transplanted into more traditional planters and growing mediums.

Grodan Slabs -The final stage of planting with growing blocks are the Grodan?slabs. These slabs come in clearly marked UV resistant poly sleeves for ease of use. Recommended for larger, long term crops with extensive roots like peppers, tomatoes, or cucumbers. Typically, seedlings in blocks are placed onto slabs. Grodan Expert is the slab that drains the fastest because of its vertical fibers. By far the most popular slab for the hydroponic hobbyist market. Grodan Master is a special wet/dry slab. The top layer is thicker, which stays wetter, while the bottom layer stays drier. In effect it defies gravity, allowing more even distribution of moisture throughout the slab.

Grodan Delta Gro-Slabs

Grodan® Gro-Slabs provide the final stage for growing a spectacularly large plant. Transplant your Gro-Block plant onto a slab just like professional growers. They come in clearly marked biodegradable UV resistant sleeves for comfortable handling and algae prevention. Water and nutrient distribution is also more uniform and provides a larger effective rooting volume than previously possible. Grodan slabs come in four sizes. The 6” wide slab is suitable for crops such as tomato, pepper and eggplant.
The 8” wide slab is used for more water hungry crops such as cucumbers. Standard cut flower slabs are designed for multi season use. They have a uniform, high fiber quality and excellent structural stability. The 4” high, 6” wide slabs are suitable for production of all types of cut flowers such as roses & carnations. For stock plant production of poinsettias, mums etc., consider the 12” slab.

Expert: Vertical fiber (fast drainage)
Classic: Horizontal fiber (slower drainage)

SKU: RW15100
Weight: 16.5 lbs.
Package Dimensions: 35.8L x 18.0W x 12.0H
Suggested Retail: $77.99
