ExHaleCo2 Cultivator

Manufacturer: HydroFarm

ExHaleCo2 Cultivator (eco-5659)ExHale CO2 Cultivator
ExHale-Homegrown CO2 cultivates CO2 24 hours a day with no need to refill bottles or use expensive CO2 production units. The power of ExHalelies in the mycelialmass inside the vented cultivator. This mycelialmass cultivates 20,000ppm CO2 and the one-way breather patch releases CO2 continually for up to 6 months. ExHalecomes complete and is cultivating CO2 even before you get out of the checkout line. No need to turn it on or turn it off, simply place ExHalein your grow space and leave it alone to do its job.
A continuous shower of CO2 directly onto your plants is the most efficient way to deliver CO2. Placing the ExHaleCultivator slightly above the level of your plants will insure they receive the CO2 they need 24 hours a day for up to 6 months.
The ExHaleCultivator is designed for small to medium grow spaces, or more specifically 1 ExHaleCultivator will provide 4-6 plants with the CO2 they need.
