Manufacturer: -

BA HUMISOLVE USA™ FULVIC CIONCENTRATE 1.5 LB (5/CASE) (719746) BioAg Humisolve

Our low heat capacity drying method provides a natural, easy to use humic concentrate with a high bio-stimulation effect. HumiSolve is an inexpensive plant and soil activator that increases cellular activities at all levels, increases availability of nutrients, converts raw organic matter faster and detoxifies plant cells. In the root system HumiSolve reduces the uptake of sodium, aluminum and other metals that negatively effect plants. HumiSolve will also buffer the soil with organic biopolymers, thus preventing tie up of nutrients and trace elements. HumiSolve is a soluble product that comes in dry powder form for easy long-term storage (liquid humates degrade over time).
