Azomite Micronized Natural Trace Minerals, 44 lbs

Model: hf-AM10044

Azomite Micronized Natural Trace Minerals, 44 lbs

Manufacturer: -

AZOMITE® trace minerals have been reported to improve root systems, yields and general plant vigor in a variety of applications; from field crops and orchards to lawn and garden use. Azomite helps remineralize nutrient-depleted soils. Azomite has been mined in Utah for more than 60 years. It is 100% naturally derived and is OMRI Listed for use in organic production and farming. Azomite is odorless and is ideal for blending with other fertilizers and amendments to help meet a plant's nutritional needs.

Conventional fertilizer programs focus on the macronutrients like Nitrogen (N), Phosphorus (P) and Potassium (K). However, if one of the many essential trace elements is deficient in the soil, the plant will not perform at its optimum, affecting yield and immune function. Azomite replenishes these essential trace minerals through a 100% naturally derived source.

Note: not for sale in Florida, North Carolina, New Mexico, South Dakota, Wisconsin
