Azos Nitrogen Fixing Microbes, 12 oz bag

Model: hf-RT1351

Azos Nitrogen Fixing Microbes, 12 oz bag

Manufacturer: Xtreme Gardening

Xtreme Gardening Azos Nitrogen Fixing Microbes, 12 oz bag (RT1351) AZOS, short for Azospirillum Brasilense, is a nitrogen-fixing super bacterium that can replace 50% of the nitrogen fertilizer required by plants. This highly-beneficial bacteria, simply applied as a spray after soil temperatures reach the 60°F - 65°F range, provides an eco-conscious alternative to synthetic nitrogen. The Earth's atmosphere is 80% nitrogen; AZOS take this free and non-polluting source and makes it available to plants. No longer is your plant confined to the soil for nitrogen intake, but now it can access it naturally, straight from the atmosphere!

AZOS works symbiotically with both your plant and MYKOS mycorrhizal inoculants, beneficially sharing nutrients and thereby reducing the use of chemical fertilizers. Azos also functions as a natural and biological cloning solution. Azos works without the use of hormones or synthetic phosphorus which can lead to spindly, yellow growth. Azos catalyzes the release of IAA, a natural hormone stored in all plants. The release of IAA causes new cuttings to drop their root. Once that root drops, one of the hardest things with new cuttings is to get nutrients into the plant when there is such little root stock. Azos solves this dilemma by fixing atmospheric nitrogen and feeding it directly into your newly developing roots. The result? Clone easier, propagate faster, and transplant in a fraction of the time.

Manufacturer's Product Information

MSRP each \$49.95

UPC689076421560

Dimensions 5.5 x 7.75 x 3

Case Weight 5

Case Quantity 6

Price: \$31.17
