Big Time Hydroponics Big Time Rinse, 1 qt

Model: hf-BTRIQP

Big Time Hydroponics Big Time Rinse, 1 qt

Manufacturer: -

Big Time Rinse is used at the end of a crop's growth cycle to trigger the last reproductive stage of the plant, forcing it to process and assimilate internally stored nutrients. Pre-harvest treatments with Big Time Rinse can enhance flavors and increase yields in fruits, vegetables, and culinary herbs encouraging plants to process these excess nutrients.

Can also be used to correct the most common cause of crop failure - the buildup of nutrient salt deposits in soil or soil-less grow media. High salt concentrations in media can cause the shrinkage and death of plant cells due to the excess draw of water through cell walls, and eventually lead to the irreversible wilting of plant leaves and stems. Periodic flushes with Big Time Rinse will remove excess nutrient salts and safely leach them from your crops media.

Big Time Rinse will: • Prevent irreversible wilting. • Gently leach salt safely without harming roots. • Trigger last reproductive stage of plant cycle. • Enhances flavor by removing excess salts before they can be absorbed by plants.

No added sugars or dilute phosphates, nothing that can be absorbed by your plants. Taste your plants flavor, not your fertilizer!

Big Time Rinse is non-toxic and safe for all plant, animal, and marine life!
