Bloom Fuel 1L

Model: hf-GTBF1L

Bloom Fuel 1L

Manufacturer: Grotek

Grotek Bloom Fuel 1L (GTBF1L) Bloom Fuel represents an entirely new method of feeding aimed at pushing plants into the flowering stage. This exciting, new 100% organic transition product is designed to cut down on the vegetative stage of growth and "switch" the plants over to the flowering stage. As the plant switches stages, Bloom Fuel can help create multiple flower sites with more lateral branching by providing just the right balance of energy nutrients.

Begin adding Bloom Fuel 7-10 days prior to the flowering stage to encourage a flowering response. Continue to use throughout flowering. Stop using 1-2 weeks before harvest. Must be used in conjunction with your regular feeding program (preferably a flower feeding nutrient).
