Blue Life Clear Fx Pro 1800ml (4/Cs)

Model: 729460

Blue Life Clear Fx Pro 1800ml (4/Cs)

Manufacturer: -

Blue Life Clear Fx Pro

CLEAR FX PRO is the most advanced all-in-one filtration media available on the market. Our cutting edge technology is compatible with both fresh and saltwater aquariums of all sizes. The easy to use media is the most comprehensive and reliable solution for aquarists of all skill levels.

Created: Monday 10 March, 2014

The proprietary blend combines a super carbon, hybrid phosphate resin and organic scavenger resin. CLEAR FX PRO works rapidly to remove organic pollutants while leaving behind essential trace elements effectively keeping aquariums clean, clear and healthy for months.

To use the product simply place the mesh filter bag within a high flow area of your filtration system. The media is compatible within both canister filters and standard sumps.

Granular Activated Carbon (GAC):

CLEAR FX PRO contains a coal based granular activated carbon (GAC). The product offers the hardest carbon available that will still work when used in water. The high surface area and durability of our unique carbon allows CLEAR FX PRO to last longer and prevent deterioration over time. Unlike other carbon based filtration medias, the extremely low ash content of CLEAR FX PRO will not lead to hole in the head or lateral line disease within your aguarium.

Hybrid Phosphate Removing Resin:

CLEAR FX PRO introduces a new and exciting technology to the phosphate removal process. Unlike competing medias, CLEAR FX PRO uses a hybrid resin that works more effectively than Granular Ferric Oxide (GFO) phosphate removers. The resin's spherical beaded structure will not clump or clog. The long lasting, high capacity resin absorbs phosphates in half the time as a standard GFO and will not release phosphates back into the water after reaching maximum capacity.

Organic Scavenger Resin:

The scavenger resin in CLEAR FX PRO attracts your tanks organics, effectively controlling ammonia, nitrate and nitrite levels. The organic scavenger resin has a macro-porous design that will not clog as quickly as competing organic removers. The resin works hand-in-hand with our GAC to deliver clarity, stability and health to your aquarium water.

PRODUCT SPECS

Product Sizes

- 225 ml: Treats 50 Gallons Freshwater, 25 Gallons Saltwater
- 450 ml: Treats 100 Gallons Freshwater, 50 Gallons Saltwater

Lifespan:

- 4 months saltwater
- 6 months freshwater
- Tanks with heavy bio-load should consider changing media more frequently

Blue Life Clear Fx Pro 1800ml (4/Cs)

Benefits:

- Crystal clear water
- Removes: odors, tannins, phenols, gases, pollutants, CO2, phosphates (PO4), silicates (SIO2), copper, metals and nitrogenous organic waste

Created: Monday 10 March, 2014

- Does not actively remove essential trace elements
- Raises Redox (ORP) significantly
- Controls ammonia, nitrites and nitrates
- Removes contaminants and irritants harmful to coral, compounds carbon can't remove alone, light blocking impurities and organics that degrade water quality by reducing oxygen
- Stimulates coral and plant growth
- Stabilizes pH (buffers without shock to fish)
- Will not release organics back into tank once exhausted
- Decreases need for water changes

Price: \$79.19
