Botanicare CNS17 Ripe (1-5-4) - Quart

Manufacturer: Botanicare

CNS17 Ripe formula is a highly concentrated, economical nutrient that produces premium results for both commercial and small scale growers. Its 1-5-4 NPK is designed to help promote ripening in your fruiting and flowering plants. CNS17 Ripe keeps your plants looking lush and green while providing more of the elements needed to help ripen and enhance your yield. Great for both hydroponic and soil applications, Ripe replaces CNS17 Hydroponics Bloom or Coco and Soil Bloom in the last 3-4 weeks of flowering.

CNS17 Ripe works by depleting nitrogen to minimum levels while leaving necessary phosphorous and potassium at optimal ranges encouraging plants to focus their energy on ripening fruit faster while maintaining foliage. Additionally, the molecular composition of CNS17 when diluted with water causes the organic structures contained in the formula to hydrolyze and serve as a supplementary energy source for beneficial microbes.
