

C.A.P. (Custom Automated Products) Advanced HID Lighting Controller

Model: hf-CAHLC

C.A.P. (Custom Automated Products) Advanced HID Lighting Controller

Manufacturer: HydroFarm

Advanced HID Lamp Control - High temperature shutdown with selectable delay.

- Combines all of the HLC1, HLC2, and HLC3 functions into one unit.
- Selectable switch lets you choose whether to run the controller for temperature shutdown, on-delay, or both.
- Temperature shuts off the outlet when chosen temperature is reached (and back on when it comes down 5 degrees). Perfect for protecting the crop in the event of overheating.
- Delay provides a 15 minute delay between power up and the HLC outlet on the controller being energized. Eliminates "hot starts" after power interruptions to avoid damaging equipment.
- Both does both functions - on delay and over temperature protection.
- The updated controller features increased processor speed, better temperature sensors, higher quality circuit board components, and more robust engineering.
- Rated for 15 amps max.
