CAP CO2-2e 2 Timer CO2 Controller

Model: eco-5789A

CAP CO2-2e 2 Timer CO2 Controller

Manufacturer: -

CAP CO2-2e 2 Timer CO2 Controller (eco-5789A) CO2/Temp/Humidity Controllers
C.A.P. CO2/Temp/Humidity Controllers - These controllers make it easy to coordinate your exhaust and CO2 production. The CO2-2 Controller has 2 timers that allow for efficient control of CO2 levels, one controls how often CO2 is released and the other controls how long it is released. It also features temperature and humidity controls that will stop CO2 production and activate the exhaust outlet if the levels that you set are exceeded. A photosensor disables CO2 production while the lights are off.

The CO2-4 Controller has the same features as the CO2-2, but includes 2 extra timers. This controller features an Overall Cycle Timer that controls the maximum time between exhaust cycles. It also has an Exhaust Cycle Timer to control how long the exhaust fans will run. Both units may be upgraded to PPM level control with the addition of the PPM-1c. They are both rated for 15 amps @ 120 volts. 3 year no hassle warranty.
