Caribsea The A.R.K. - The Aragonite Refugium Kit

Manufacturer: -

CaribSea The A.R.K. - The Aragonite Refugium Kit

Micro floras, micro faunas, and sponges can provide a valuable food source for hard to feed reef tenants such as angelfish, tangs, mandarin gobies, butterfly fish, and larger invertebrates. CaribSea's ARK is the first complete refugium kit for marine and reef aquariums which caters to the growth of these hard to obtain, hard to produce, natural foods. Only the ARK contains substrates from .1 mm to 125 mm long axis, creating a haven for not only denitrifying and nitrifying bacteria, but also benthic organisms such as copepods and decapods. The larger macro-pores created by the variety of calcium carbonate rubbles form a cryptic zone to encourage the growth of water purifying sponges and larger invertebrates such as shrimp, worms, and serpent stars. Also inside, a 5 lb bag of CaribSea's Mineral Mud to be used around Caulerpa, Halimeda, and other macro-algae plantings or anchors. The ARK also contains a 4 ounce bottle of Purple Up, the only patented coralline algae accelerator, and an 8 ounce bottle of Aquabiotic to aid in the start up of necessary water purifying bacteria. You will also find an 80 gallon dose of Bio-Magnet, which clarifies water and places bacteria within the substrate and filter media as needed.

CONTENTS: (all in 5 gallon bucket) 40 lbs of Arag-Alive!™ Bahamas Oolite aragonite sand, .1-1.0 mm. ; 10 lb. of natural calcium carbonate rubble 25+mm; 5 lb. of Mineral Mud™; 1- 8 ounce AquaBiotic™; 1- 4 ounce Purple-Up™; 2- 40 lb. dose packs of BioMagnet™. 5 gallon bucket
