Clonex Mist, 300 ml (No USPS)

Model: hf-HDCLOMIST300

Clonex Mist, 300 ml (No USPS)

Manufacturer: HydroDynamics International

This product from the leaders in propagation is designed as a fine mist for clones and seedlings. It is formulated to help enhance the health and vigor of tender young plants while promoting robust root development and elongation of root hairs. After successful stability tests were concluded, Dr. Lynette Morgan of Suntec Laboratory in New Zealand performed several independent blind trials. In these trials Dr. Morgan showed that the program of using Clonex Mist, along with Clonex Rooting Gel, on Ficus and Dianthus cuttings, generated roots up to 10 days earlier, with the roots being 30% longer and 156% more numerous compared to using water alone to mist cuttings. Note: not for sale to WA
