EZ CO2

Manufacturer: -

EZ CO2 (202886)EZ CO2 is a natural, safe, and inexpensive way of providing your plants with carbon dioxide (CO2). CO2 tanks and generators can be expensive and time consuming, but EZ CO2 requires no set up or maintenance and is easy on your budget! EZ CO2 houses a non-fruiting mycelial mass (fungus) and enough organic matter to sustain it for approximately 6-8 months. The fungus works opposite a normal plant: it breathes in oxygen and breathes out carbon dioxide (released 24 hours a day through the breather patch on the bag), essentially creating a natural, self-sustained, inexpensive CO2 generator. EZ CO2 is odor-free, produces no heat, and is already giving off CO2 as soon as you purchase it, there's nothing to turn on or set up.

INSTRUCTIONS: After purchasing your EZ CO2, place it in your growing area (1 bag is recommended per 4' x 4' area) slightly above plant height. CO2 is heavier than oxygen, and will fall downward onto your plants. That's it! There's no need to refill anything or make any adjustments. DO NOT REMOVE THE BREATHER PATCH ON THE BAG.
