Gro1 Greenhouse Vaporizer

Manufacturer: -

Gro1 Greenhouse Vaporizer (205011)The Gro1 Sulfur Burner is the best tool for preventing and ridding your greenhouse of pests and fungus, and works especially well on powdery mildew and thirps. This burner is designed to heat the sulfur to the necessary temperature for vaporization (140 C) and will cover approximately 1,000 sq. ft.

HOW IT WORKS

Once the sulfur is heated to a certain temperature by the burner, the vapors get released into the air and gently coat the plants in your greenhouse. This sulfur coating changes the natural pH on the surface of the leaves, creating an atmosphere that is not suitable for fungus and pest reproduction.

WHAT YOU NEED

You will need to purchase sulfur pellets to use with this burner. It is also recommended to use a timer, sold separately. Instructions and Sulfur Cup are included inside.
