## Grow 16 oz.

Model: hf-HNG404

Grow 16 oz.

Manufacturer: Humboldt Nutrients

Humboldt Nutrients Grow 16 oz. (HNG404)Grow 2-1-6  
Humboldt Nutrients Grow formula, was designed in Humboldt County to be used with our Micro and  
Bloom to be a complete growing nutrient system for hydroponics as well as other growing mediums.  
Humboldt Nutrients has developed this vigorous three-part fertilizer without the use of  
synthetic chelates.

Grow contains elements which form new compounds with weak electrical bonds. This increase in  
availability of electrons promotes efficient absorption and uptake of nutrients. This diverse  
formula helps assure that none of the elements necessary for plant growth will fall out of solution and  
lock out.

Through extensive research and development, the Humboldt Nutrients team of chemists has  
formulated an easy to use fertilizing program for use on a variety of vegetables, flowers or  
herbs.

If you want to maximize your results, this is the 3-part base system for you.

Our premium three-part nutrient system leaves nothing to chance and ensures an excellent crop.

When used in conjunction with our high powered additives, Humboldt Nutrients assures  
that our three-part fertilizer program will produce fantastic yields and premium quality crops.

### DIRECTIONS:

Fill your reservoir with clean water before administering any nutrient or additive.

Make sure that the water level in your reservoir is sufficient enough to effectively flood your desired  
area or table.

Potential nutrient lock-up can be avoided by adding the Micro before the Bloom and Grow.

Always wash your measuring cup immediately after adding and stirring in each nutrient.

Never mix any of these nutrients together in their concentrated form.

After adding and stirring in each nutrient, check and adjust the pH to between 5.0 and 6.5. Always  
check a small sample of water, not the whole reservoir.

Not all meters will read identically, Humboldt Nutrients tests are conducted with a Hanna HI9813-0  
meter.

Keep the water temperature in your reservoir between 66 and 75 degrees F.

Drain your reservoir and pumps at least once a week to prevent any salt build-up.

DERIVED FROM: Ammonium Nitrate, Magnesium Phosphate, Nitrate, Potassium Nitrate, Magnesium  
Phosphate, Potassium Phosphate, Potassium Carbonate, Potassium Sulfate, Magnesium Carbonate  
and Magnesium Sulfate.

Please avoid storing in direct sunlight and protect from freezing.
