

Master Digital Timer

Model: hf-APCTMDT

Master Digital Timer

Manufacturer: HydroFarm

Autopilot Master Digital Timer (APCTMDT) Combination Recycling and Lighting Timer The Autopilot Master Digital Timer (MDT) controls lighting and recycling functions in your grow area. The MDT has dual timer functions, a 24 hour time clock for lighting and a recycling timer for pumps or CO2 injection. The MDT has four outlets. One controls a pump or other recycling device; two are for daytime devices such as lights and light movers; and one is for a night device, which would turn on at night.

The MDT features a high temperature shutdown function that detects unsafe high temperatures in the grow room and turns off the HID lights in the event of a ventilation failure. The MDT also features hot start protection to ensure proper lamp cooling before attempting to re-fire. The precise cycle timer can be programmed anywhere between 1 second and 96 hours.

• Precise digital time clock with battery backup • Adjustable high temperature shutdown and hot start prevention • Recycling on/off range - 1 second to 96 hours • 3' remote temperature probe

NOTE: This controller has a 14.5A maximum load. For higher amperage units, or combined lighting wattage above 1200W, it is recommended to use a lighting controller.
