Oneness 2.5 gal.

Model: hf-HNO415

Oneness 2.5 gal.

Manufacturer: Humboldt Nutrients

Humboldt Nutrients Oneness 2.5 gal. (HNO415) Oneness 5-9-4

Through extensive research and development, the Humboldt Nutrients team of agronomists and chemists have created the first naturally chelated one-part formula on the market.

Oneness (5-9-4) is Humboldt Nutrients own unique blend of plant-based amino and organic acid chelates, concentrated in a solution with complex carbohydrates, macro and micro-nutrients, metals and trace elements which are naturally found in healthy soil and vegetation.

Oneness is the perfect solution for the beginning gardener, looking for experienced results. Formulated with over 30 proprietary natural chelates, Oneness assures that your fruits, vegetables, and herbs will receive adequate nutrition during the vegetative and flowering stages.

This diversity of chelates protects your garden from nutrient lock-out, salt build-up, low yields, and prevents your nutrients from falling out of solution. Only when your plants requirements are fully addressed can they reach full potential.

Oneness is 100% bio-degradable and made with chelates derived only from natural sources, setting Oneness apart from the competing synthetic chelated one-part formulas. Synthetic chelates can raise the salt-index in a biochemical system, choking out all biological activity.

When foliar sprayed, the trademarked phosphorus booster used in Oneness makes photosynthesis in your plants function optimally, while the wide range of nutrients correct potential deficiencies.

The Oneness Program developed by Humboldt Nutrients works excellent in re-circulating systems, aeroponics, fogponics, deep water culture and all other gardening systems.

This diversity helps the Oneness live up to its name.

In these uncertain times of tribulation, the world needs Oneness.....and so do your favorite plants.

DIRECTIONS:

Cuttings/Seedlings1ml/gallon

Vegatative Stage (Week 1-2).... 3-5ml/gallon

Flowering (Early/Transition Stage Week 1-3) 5-10ml/gallon

Full Bloom (Fruiting Stage Week 4-8)....10-15ml/gallon

Flush Stage (5-10days)....NONE

Foliar Spray Add 5-15ml/gallon of water. Spray directly on plants during the evening or when lights are off.
