

## Powerbox DPC-2400BT (Blue Tooth)

Model: hf-PB70500

Powerbox DPC-2400BT (Blue Tooth)

Manufacturer: PowerBox

This unit has everything you need to run up to 24 1,000 Watt lights, plus accessories at 120V. Best of all, this unit contains our exclusive new 6-Channel Timer, which allows you to control outlets in six separate zones, making this the most versatile lighting controller available on the market.

Main circuit protection is provided by a 150A circuit breaker. Additional protection is provided by mini circuit breakers that protect each set of outlets. The breakers on the 240V outlets (green) can also act as switches to individually switch outlets off.

Designed and manufactured in California from the best industrial-grade components, the DPC-24000 is currently pending ETL/UL/CAN/CSA Approvals.

Setup is fast and easy. You can wire this unit directly to your main power source with heavy-duty terminal lugs that allow you to connect up to 0AWG wires directly to the unit, with easy access by removing the rear panel.

There are keyhole tabs so you can easily mount the unit to the wall.

There are a total of TWENTY FOUR NEMA type 6-15 240V outlets to power your lights, and 8 NEMA type 5-15 outlets to run your light-duty accessories. Our exclusive 6-Channel Timer allows you to control the power outlets in zones - you get control over 4 independent zones of (6) 240V outlets, 2 independent zones of (3) 120V outlets, and there are 2 constant 120V outlets.

The DPC-24000 also has an iPhone App! By downloading the FREE app from the AppStore, you can control the DPC-24000 from your iPhone via BlueTooth Smart wireless technology. This allows easy programming, monitoring, and configuration of this unit, without having to be right in front of it.

Safe, quick to install, and easy to use. Don't even consider plugging your expensive gear into a cheap controller. Lighting requires more power than anything else in your garden, so when safety and reliability matter, Powerbox® is your only choice.

FEATURES:

150A Main Capacity.

Protection tabs to prevent accidental breaker shutoff.

Mini-breakers to protect outlet banks individually.

6-Channel digital timer allows control of outlets in independent banks.

Battery backup to store timer programs during power outages for up to a year.

Twenty Four NEMA type 6-15 240-volt outlet receptacles.

Eight NEMA type 5-15 120-volt outlet receptacles.

BlueTooth Smart Enabled.

iPhone App for controlling unit from your iPhone.

Optional Accessory Ports allow use with other controllers, like a high-temp shutoff.

Heavy-duty terminal lugs for direct-wiring up to 0AWG cable.

Conduit/cable entry allows for up to 1.5" cable or conduit.

Durable powder coated 14 gauge seamless steel enclosure.

Keyhole tabs for easy mounting to wall studs.

INPUT: 240VAC, Rated for 150A, 4-Wire Connection.

Three Phase compatible models available.

ETL, UL and CAN/CSA Approvals Pending.

Designed and manufactured in California.
