Propagation Mat, 12" x 48", 60W

Model: hf-19007

Propagation Mat, 12" x 48", 60W

Manufacturer: HydroFarm

Bottom heat is one of the most important and effective enhancements to germination and rooting. Our new Propagation Mat warms the rooting area to approximately 10°F-20°F above ambient temperature, which markedly improves germination rates and rooting success.

The Propagation Mat is 48" long-perfect for placing two standard trays end-to-end, and ideal for placement under 4-foot fluorescent fixtures. At 12" wide, it also ensures that the entire bottom surface of all your trays will be heated uniformly. These mats can be daisy-chained (up to 10 mats) to reduce the number of power outlets needed to run multiple mats to a single outlet, and their heavy-duty construction and materials guarantee years of reliable service.

Specifications:Dimensions: 12" x 48" 60W | 120V | 50/60Hz5' power cord

Price: \$35.25
