## Rootech Gel 7g

Model: hf-TFRTG7G

Rootech Gel 7g

Manufacturer: Technaflora

Technaflora Rootech Gel 7g (TFRTG7G) Rootech Cloning Gel is an exceptional and unique recipe containing a powerful hormone especially formulated to promote rapid, healthy root development during vegetative propagation. At application, Rootech's unique formulation surrounds the stem with sustenance it can immediately use.

While Technaflora's original formulation is among the strongest cloning gels on the market with a concentration of 0.55% (5.5 g/l) IBA, a potent rooting hormone, the manufacturing process ensures the highly concentrated gel is evenly dispersed, protecting developing rootlets and plant tissues. Rootech Cloning Gel is ideal for propagation of the most hard-to-root plants. It can also be diluted with water for use on cuttings that will form roots more easily.

Rootech Cloning Gel is packaged in a ready-to-use, wide-mouthed container, into which several cuttings can be dipped at the same time without the risk of mess and spills. The gel format ensures ease of use and helps avoid the risks of inhaling dusty powders. This power-packed cloning gel consistently fosters robust clones with healthy, fast-growing root systems.
