Seaplex 8 oz.

Model: hf-BCOSX8

Seaplex 8 oz.

Manufacturer: Botanicare

Botanicare Seaplex 8 oz. (BCOSX8)

Seaplex is a cold processed seaweed for foliar feeding, soil and soilless container gardens and hydroponic systems. Seaplex can be used for certified organic crop production. Seaplex contains only the most effective *ascophyllum nodosum*, a brown kelp that is harvested from the cold, clean waters of the north Atlantic. Brown Kelp's slow growth cycle packs it with maximum levels of amino acids, enzymes, micronutrients, plant hormones (auxins, cytokins, gibberellins) and soil biology that encourages vigorous and healthy plant growth.

Exclusive mineral enhancement:

Seaplex's natural, potent mixture is enriched with a proprietary enzyme structure, along with a wide range of ionic minerals. These quality ingredients are processed into a rich, creamy liquid supplement that can be applied through any irrigation feed method.

Seaplex is prepared using a patented process that has distinct, specific advantages:

Cold processed to protect organic integrity

Homogenized to prevent separation

200 mesh screen filtration

Mineral enhanced

Water soluble for easy mixing

OMRI listed

The growth hormones in Seaplex are essential for cell division, root development, and bud initiation, making it a natural growth enhancer. Seaplex is also high in betain, a natural occurring amino acid derivative.

Amino acids

Seaplex has over 17 amino acids that are essential for increasing plant metabolism of minor elements in the soil- such as zinc, manganese, iron, boron, copper, cobalt and molybdenum.

Carbohydrates and polysaccharides

Alginic acid, mannitol and mannose sugars, all found in Seaplex, are natural chelating agents that release nutrients which are tied up in the soil or grow media. Oligosaccharides- a special class of carbohydrates- are essential for bud and flower formation, fruit set and fruit and flower development.

Seaplex 8 oz.

Organic plant acids, enzymes and micronutrients

Seaplex's unique formula combines organic plant acids, enzymes and over 72 minerals. These ionic minerals are natural plant nutrients essential to photosynthesis, elemental metabolism and cell formation. Ionic minerals, a natural electrolyte, are considered to be nature's most effective chelating agents. Their high CEC rating and small size help carry nutrients directly to the plants metabolic sites.
