SG Lite Ballast 1000W, 277V Convertible

Model: hf-SGO1277C

SG Lite Ballast 1000W, 277V Convertible

Manufacturer: HydroFarm

Get more ballast for your buck with the SG Lite, which is light on price but heavy on features. Experience the power of a ballast straight out of Hydrofarm's value line. This ballast is built to last with an exclusive design that allows electrical contact to happen only when a seal is achieved. The SG Lite ballast offers a compact design, to save space in the grow room, and a water-resistant seal to protect against misting and sprays. All SG Lite ballasts also feature the Lock & Seal plug system, with recessed contacts to ensure safety during plug-in; a unique, circular prong pattern for secure electrical contact; and a collar that protects against accidental electrical contact. This SG Lite ballast is wired for its 277V capability (power cord included), and is CSA certified.

Exclusive Lock & Seal Plug System

The unique pin configuration and the recessed receptacle design offer convenience, safety, and a water-resistant seal. This design allows electrical contact to happen only when a seal is achieved, guaranteeing the user's safety and preventing premature ballast failure that can occur in other brands due to inferior plug designs.
