

SNS 244 Fungicide 32 oz

Model: dl-SNS244-32OZ

SNS 244 Fungicide 32 oz

Manufacturer: -

SNS 244 Fungicide 32 oz (SNS244-32OZ) SNS-244 Ready to Use Natural Fungicide is made up of 100% pure Thyme botanical extracts. The botanicals are all food grade GRAS (generally recognized as safe) materials.

How It Works

Airborne 'pathogenic' or disease-causing fungi get inside the plant either by making a hole in its skin (epidermis), or by growing in through the plant's breathing holes (stomata). Then they either poison and kill the plant cells before absorbing food from them or simply steal nutrients from the living cells. Some fungi live in the soil and enter roots. They can either block the water-conducting cells or kill them, causing the plant to wilt. In many cases the plant is seriously damaged or may even die. Such pathogenic fungi can threaten our crops. As a topical spray SNS-244 Ready to Use Natural Fungicide kills the fungus through a biochemical interaction on the spores. Some of the components of SNS-244 Ready to Use Natural Fungicide are also absorbed systemically by the plant, suppressing the life cycle of the fungal spores and nurturing the plant cells to increase the plant's ability to fight the disease. Our Product has been tested in our lab on delicate new growth, clones, tomatoes, strawberries, lettuce, spinach, roses, potatoes, citrus, apples and other plants.

Uses

SNS-244 Ready to Use Natural Fungicide can be used on a wide variety of plants, vegetables, and even trees. When applying the product take caution not to spray any buds on the plant. Doing so could result in burning the buds sprayed. SNS-244 Ready to Use Natural Fungicide can be sprayed on fruits, vegetables, and plants including beets, broccoli, cabbage, carrots, cauliflower, celery, cherries, chives, corn, cucumbers, peppers, tomatoes, parsley, fuchsia, roses, flowers, house-plants, trees etc.

Directions for use

Test spray for Phytotoxicity on a small area of the plant before use. Water infected plant well before spraying SNS 244. Do not spray in direct sunlight or under grow lamps. Shake well, adjust spray nozzle setting. Spray directly onto fungus and infected areas until thoroughly covered. Spray as needed when fungus is seen, most effective when used on a 7-14 day schedule. Because it is made of natural ingredients you should shake the bottle before using and once in a while during use. Thoroughly wash all food areas and food materials contacted, with soap and water. Do not spray near heat or open flame.
