SNS 604B Flowering Growth Supplement, 32 oz

Model: hf-SN604B32OZ

SNS 604B Flowering Growth Supplement, 32 oz

Manufacturer: -

SNS-604A™ Vegetation Organic Growth Supplement Concentrate & SNS-604B™ Flowering Organic Growth Supplement Concentrate (512 to 1) - Grow Bigger, More Robust Roots & Flowers for Larger Yields

SNS-604A and SNS 604B are a one-part nutrient additive to be used throughout the plants growing and flowering cycle. Stimulates root growth and builds up hardy productive roots fast with 100% natural growth hormones. SNS-604A and SNS 604B are a concentrated blend of plant and marine extracts.

How it Works: SNS-604A & SNS-604B enhance nutrient mineral uptake and transport in your plants. The SNS-604 technology facilitates the conversion and biosynthesis of complex aromatic compounds plus enhances metabolic growth, promotes root & flower development, encourages fruit swelling, and facilitates essential oil production. SNS-604A & SNS-604B will also encourage beneficial microbial activity in the root zone. Your plants will increase in flavor, yield, and color!

Directions for Use SNS-604A: Hydroponics- Mix ½ oz per gallon. Add nutrient solution with each reservoir change. Use through vegetation growth cycle. Soil & Coco: Mix ½ oz per gallon. Mix well & apply to root area daily during vegetation cycle. Foliar: Mix ¼ oz per gallon. Mix well and spray leaves every 3 to 5 days during vegetation cycle. Do not spray under direct sunlight or grow lamps.

Directions for Use SNS-604B: Hydroponics- Mix ½ oz per gallon. Add nutrient solution with each reservoir change. Use through the budding & flowering cycle. Soil & Coco: Mix ½ oz per gallon. Mix well & apply to root area daily during budding & flowering cycle. Foliar: Mix ¼ oz per gallon. Mix well and spray leaves every 3 to 5 days during budding & flowering cycle. Do not spray under direct sunlight or grow lamps.

Helpful Tips: • Use ½ of the recommended amount of SNS-604A when growing in porous soils. • Add a surfactant when using SNS-604A or SNS-604B as a foliar spray • Keep pH at 6.8 when using in a hydroponics system • Mix SNS-604A or SNS-604B in warm water (60 to 70 degrees) to reduce mixing time • Dip a clone into a dilution of SNS-604A to improve rooting speed • Start seeds using a dilution of SNS-604A to improve sprouting speed
