SubCulture B 600g Jar

Model: hf-GH1585

SubCulture B 600g Jar

Manufacturer: General Hydroponics

SubCulture®-B

Bacterial Root Inoculant• Selected microbes are cultured to live in high salt environments• Biologically aids nutrient absorption

SubCulture-B is a probiotic inoculum of beneficial microorganisms that will help increase the vitality and yield in all plants.

Whether in soil or hydroponics, General Hydroponics proprietary blend of bacteria fungi colonize the root zone and media to form a symbiotic relationship with your plants. Root systems will increase, as well as nutrient absorption; thus creating bigger, healthier plants.

Start with SubCulture-M, add SubCulture-B to establish root systems.
