TurboKlone T144 Klone Machine w/ Humidity Dome

Model: 747420

TurboKlone T144 Klone Machine w/ Humidity Dome

Manufacturer: -

The TurboKlone T144 Klone Machine helps you propagate a wide-variety of plants aeroponically - without the use of soil or other growing mediums. The System has 144 Clone Sites that allow your plant cuttings to be suspended inside the TurboKlone where multiple spray jets send a continuous mist of nutrient-rich water solution to the clone roots, promoting the development of a healthy, robust root structure. TurboKlones design helps decrease root damage from pests and disease so your plants can grow healthier. The TurboKlone is your first step in successful plant propagation. Turboklone's patented fan technology helps to keep the unit cool, combating high temperatures that can kill roots all while keeping harmful bacteria at bay. Available with or without the humidity dome.
