X Nutrients Grow Spray (1 Quart)

Manufacturer: -

X Nutrients Grow Spray (1 Quart) (XNHFLSP-1QT) Grow Spray is a power packed nutrient spray applied to a plant's leaves prior to its flower and fruit stage. It can be used in soil or in hydroponic systems and alongside other nutrient products. Grow Spray is extremely effective and is safe to use with other nutrients. Though it is important to water plants with nutrients, Grow Spray can produce up to 20% additional growth. Grow Spray will produce larger, greener leaves and larger fruit or flowers. Easy to use, Grow Spray has all the right ingredients in one bottle. For the flowering or fruit stage, use Bloom Spray for maximum yield, size, and density. Available in 1 Quart 1 Gallon 2.5 Gallons 5 Gallons Refer to feeding schedules for amounts and usage. General Usage: Hydroponics or Soil/Coco/Other medium - 15 mL per liter of water to make a spray. Spray leaves on top and bottom twice a week. Specific Usage: Hydroponics or Soil/Coco/Other medium - Refer to the feeding schedule for week by week amounts to use. X Nutrients Grow Spray grows your plants bigger, faster. It is designed to reduce your cycle time by increasing growth during the vegetative stage. One of the most effective ways of feeding a plant is through its foliage. Grow Spray is applied directly to the top and bottom of the plant's leaves. Absorption of the nutrient elements occurs through the stomata and epidermis. Research has shown that the rate of absorption and movement of nutrients throughout the plant through foliar feeding can be as fast as one foot per hour to all parts of the plants. Foliar feeding should be done early in the morning or just as the lights are coming on. X Nutrients Grow Spray is packed with macro nutrients and has a wetting agent already built in. The wetting agent, also known as a surfactant, helps a plant to absorb the nutrients by reducing the surface tension of the liquid. When applying Grow Spray, use a fine misting. If you are in a high humidity area, make sure you have good air circulation; this will ensure your environment does not become stagnant or too wet. The recommended temperature for spraying is around 80 degrees. For optimal results, spray both the tops and bottoms of the leaves. X Nutrients Grow Spray can be used alongside other nutrient products. We recommend using our Grow, Micro, and Amino Blast with Grow Spray. It can be used indoor and outdoor in all systems and with all mediums. Grow Spray will help with the production of larger greener foliage. Grow Spray is designed to help a plant during the vegetative stage and is formulated high in nitrogen, providing an essential element in the growth of a plant. When the plant enters the fruiting or flowering stage, switch to Bloom Spray. Grow Spray will give you explosive growth overnight. Since the absorption and nutrient distribution rates are extremely high when foliar feeding, the plant has immediate access to nutrients. Within several hours, even a large plant will have been fed. Grow Spray can compensate for a number of NPK deficiencies. Since it is applied directly to the leaves, it is not reliant on the pH of the soil or hydroponic system. Improper pH can cause deficiencies by not allowing absorption of essential elements through a plants root system. Grow Spray has helped many gardeners compensate for these deficiencies. Although there are many systems and methods for growing, great growers never stop learning. We have had everyone from beginners to top notch growers use our Grow Spray in side by side testing and the results have been astounding. Not only have the plants grown faster through the vegetative phase, but they have also produced more during the fruiting and flowering stages. Don't take our word for it, visit our Facebook page (www.facebook.com/hydroponix) and hear directly from growers who have X-perienced our products. Grow Spray is competitively priced; no gouging the customer, and no skimping on ingredients. We provide quality at a very affordable price. Bottom line, try Grow Spray and you will be amazed at the results!
