Zenport MV190 36 inch Orchard and Landscape Tree Lopper. Cuts 2 inches. (Bahco P160-90 Complete Set)

Manufacturer: Zenport

Zenport MV190 36 inch Orchard and Landscape Tree Lopper. Cuts 2 inches. (Bahco P160-90 Complete Set) (MV1-90) Zenport MV190 36 inch Orchard and Landscape Tree Lopper. Cuts 2 inches. (Bahco P160-90 Complete Set) The Zenport MV190 Professional Orchard and Landscape Tree Lopper is widely used by professional orchard pruners as well as landscapers for orchard, shrub and tree pruning. This is the ideal bypass lopper for pruning Orchards. Features a specially designed cutting head for intensive landscape use.

The swivel head bolt and nylon-padded nut ensure smooth and lasting operation. Rubber bumpers absorb the shock on completion of cut.

Designed for cutting live wood. The cutting blade of this lopper slides past a counterblade in a scissor action, hence the name "bypass".

The pivot bolt of the Zenport MV190 lopper is offset from the natural centre-line of the tool. This unique design feature creates a slicing motion during cutting, which greatly assists the pruning of live wood and spreads wear over a larger area of the blade for increased life.

The hook shape of the Zenport MV190 lopper counterblade enables a large cutting diameter and holds the branch steady during cutting. The sap groove is a recess which reduces the area of contact between blade and counterblade and results in less friction and sticking.

Two metal handle lengths to choose from: (MV175 30" and MV190 36" / 75 cm and 90 cm).

Both have a cutting thickness of 1 3/4" (4.5 cm).

Soft rubber buffers between handles prevents fatigue.

All Zenport replacement parts are compatible in performance and design with equivalent European industry standard models.
