B'Cuzz Bloom, 32 oz

Model: hf-BZBQT

B'Cuzz Bloom, 32 oz

Manufacturer: Atami

Atami B'Cuzz Bloom, 32 oz (BZBQT) Because a plant's blooming phase may be the most important in its growth cycle, Atami has developed the B'Cuzz Bloom Stimulator. B'Cuzz Bloom Stimulator encourages flower cell production and increases the manufacture and transport of sugar molecules in the flower development. This will lead to big, dense flowers and great taste. In this way, quantity as well as quality will increase on the final product. This bloom additive will help push your plants into bloom and keep them there. When a vegetative plant takes in blooming cells through the root system, those blooming cells set off a chain reaction within your plant. Coupled with the lights being cut from 18 to 12 hours, your plants will have no choice but to stop growing and start producing fruits and vegetables.

B'Cuzz Bloom Stimulator helps stop stresses such as interrupted light cycles, temperature variations that come with cold mornings, and inevitable power outages in their tracks. Continual use of these bloom additives will ensure your plants will stay on the right course. Derived from: Laminara Digitata, Ascophyllum Nodosum
