SP-90 Soluble Humate Powder 1 lb

Manufacturer: KIS Organics

TeraVita Humic Acids

SP-90

Humic acids are primarily found in manure, peat, lignite coal, and leonardite. Leonardite is a highly oxidized form of organic matter and the source for our humic acids. Humic acids work great as a food substrate and food for beneficial microorganisms in your compost tea. Humic acids have been shown to increase seed germination rates and percentages, assist in breaking up compacted soils and clay, assist in transferring micro-nutrients from the soil to the plant, and enhance water retention. If you are having disease problems or wish to increase the fungal component in your tea, we highly recommend adding humic acids. Only 1 Tablespoon of SP-85 or SP-90 is sufficient in our 5 gallon brewer. Please call for amounts in our larger brewers. Humic acids can also be applied in a separate application as a soil amendment. Go to www.teravita.com for more information.

Our 100% soluble powder is as pure as it gets. Containing only minute levels of moisture (
